Tohono O'odham Proposal for 12% Gaming Distribution

Project: Horizon Health and Wellness

a) **Explain the perceived need and explain how the proposal will address that need:**
Horizon Health and Wellness (HHW) is a non-profit 501(c)(3) integrated health care agency licensed by the State of Arizona and accredited through the Joint Commission to deliver an extensive array of healthcare services for all ages and stages of life. The communities that HHW serves are rural areas with limited healthcare resources especially for those that suffer from chronic medical health issues as well as mental illness or substance use disorders. HHW is proposing to purchase and implement Azara Healthcare's Value-Based Care Reporting platform into the current electronic health record HHW utilizes. The Azara platform provides data to close health care gaps such as diabetes testing (A1C), colorectal cancer screening, women's health indicators, etc) in the communities and population that HHW serves. Chronic Health issues such as diabetes and cancer can be diagnosed early and interventions applied to save lives. Screening can be performed, patients diagnosed, and early interventions applied when healthcare providers have the data to reach out to patients to schedule needed appointments. The platform aggregates and integrates claims and clinical data and provides reports with useful information to the healthcare providers on client specific needs. The platform also has texting capabilities that HHW will utilize to remind patients of needed appointments and procedures. The Azara platform also can provide information on patient specific needs outside of healthcare that may have an impact on their health such as housing, transportation and food insecurity. HHW can utilize this data to assist the patient in overcoming these barriers so they can focus on healthcare which will increase their health outcomes.

b) **Describe the population who will benefit from the proposal if approved:**
This project will benefit the communities of Casa Grande, Apache Junction, Globe, Florence and Oracle as well as the surrounding areas by offering a fully integrated data platform that will allow providers within the HHW system to assess specific data related to patient needs. Individuals within these rural communities often lack basic preventative healthcare and only seek care when needed due to various barriers. The Azara platform will be providing data to the HHW providers not only on healthcare needs that the individual will need to address but also information and data on barriers that may prevent an individual from seeking care. This information will be utilized by the HHW care team to formulate a full treatment plan that addresses the whole person and seeks to remove any barriers and increase access to healthcare.

c) **Include a budget of the requested funds, with the total amount requested clearly notated:**
Implementation of Azara into the current electronic record system: $67,500
